

# LA SOCIEDAD "THE NIAGARA SPANISH AEROCAR COMPANY"

Ante el éxito alcanzado por el transbordador del Monte Ulía, la Junta general de la Sociedad "Estudios y Obras de Ingeniería" autorizó al Consejo de Administración para realizar las negociaciones con objeto de construir un segundo funicular del sistema en la zona del **Parque del río Niágara** conocido como el Whirlpool (remolino), **aguas abajo de las cataratas**.

Para ello se formó la **Sociedad "Transbordador Español del Niágara"**, con un Consejo de Administración coincidente con el de "Estudios y Obras de Ingeniería".

**WHIRLPOOL SPANISH AEROCAR**

Second Stop from Bridge St., Niagara Falls (Canadian Side) by Gorge Route Cars or International Railway Cars

**NIAGARA SPANISH AEROCAR COMPANY, LIMITED**  
IN OPERATION THROUGHOUT THE YEAR

FULL VIEW OF AEROCAR FROM STATION TO STATION  
LONGEST AND SAFEST PASSENGER CABLEWAY IN THE WORLD

**STOP! LOOK! LISTEN!**

THE REAL scenic beauty of the Whirlpool and Rapids, and of the Niagara River is only now unfolded to lovers of nature, by means of the **Spanish Aerocar**, which stretches across the Whirlpool on a span of 1800 feet, 150 feet above the water, affording new and uninterrupted views of the magnificent surroundings, until now quite unattainable.

A severe and searching test of the cableway was made by the Ontario Department of Public Works, with eminently satisfactory results before it was opened to the public. A cableway of the same design and installed by the same company has been in operation for the past nine years at San Sebastian, Spain, with so much success and without accident of any description, that it decided the company to build the present one at Niagara Falls.

Cars of the International Railway and the Gorge Belt Line Route pass both stations of the Aerial Cableway, namely at Colt's Point and Thompson's Point, enabling passengers to cross either way by the Aerial Line, resuming their journey at the other side by a later car.

The trip across takes about six minutes.

The Aerial Car will be in operation throughout the year. In winter, passengers alighting at Colt's Point can cross by the Aerocar and be in time to resume their journey on the same car at Thompson's Point.

Accommodation is provided in the Aerial Car for thirty-six passengers at a time.

Fares in Summer, 25c single; 50c return. Fares in Winter, 50c single; 75c return. The Company reserves right to change fare without notice.

La nueva Sociedad tuvo que registrarse en Canadá con el nombre de **"The Niagara Spanish Aerocar Company"**, y sería la encargada de llevar a cabo la construcción.

En suma, en una España que todavía no había alcanzado los objetivos de regeneración anhelados tras el "desastre" del 98, nos encontramos en la rica Norteamérica con un proyecto español, técnica española, empresa constructora española, capital español y explotación inicial española.
